

CLOUD TO CLOUD BACKUP OFFICE 365

Protect your Office 365 data

Your data is crucial to your business, wherever it lives. Maintain control of your SaaS data with effective backups.

- Access your data at all times – even when the cloud-based platform is not available
- Remain compliant with statutory and regulatory requirements
- Protect your intellectual property
- Ensure your backed up data is secure and safe from unauthorised access
- Revert to a previous point-in-time copy of your data within minutes
- Restore your data directly back into the cloud
- Keep data of past employees
- Protect your data from deliberate deletion from a disgruntled employee (Your Office 365 Admin cannot remove data)
- Retain your data after the end of your subscription

“One common misconception is that SaaS providers’ native high availability (HA) and disaster recovery capabilities will address all data loss scenarios including users’ accidental or malicious deletion. In fact, many enterprises are often surprised to find out (sometimes too late) that their chosen SaaS solution(s) lack the standard backup/ recovery capabilities they have experienced and taken for granted with their on-premises backup capabilities.

Do You Need to Cover Your SaaS to Prevent Data Loss? - Pushan Rinnen, Dave Russell, Gartner, January 2015

CLOUD TO CLOUD BACKUP

OFFICE 365

Features

- Granular backups of data residing in cloud-based applications and platforms
