

A Microsoft 365 Security Case Study

London Based Technology Recruitment Experts

The Challenge

The benefits of moving their Microsoft environment to the cloud were clear to the agency when they made the decision a couple of years ago.

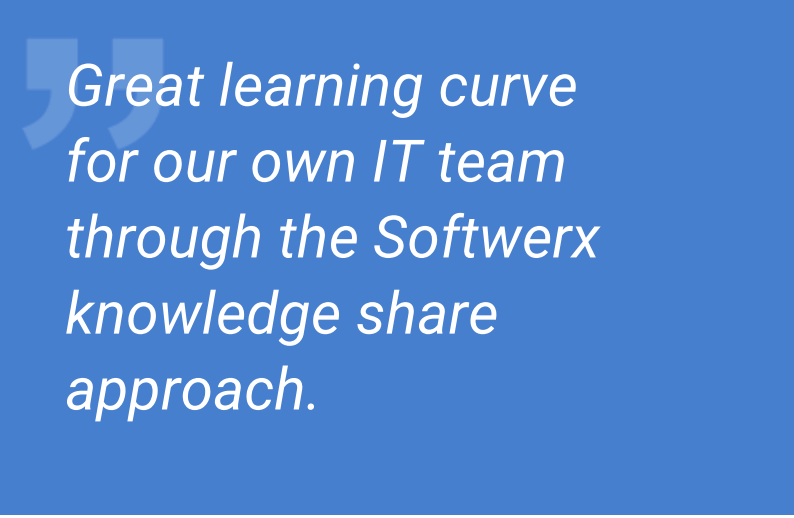

However, what they didn't properly understand was how to ensure it was safe. They needed support to help secure their cloud environment.

The Solution

The agency was recommended to speak with SoftwareX.

SoftwareX were able to provide the in depth knowledge of Microsoft security they needed.

SoftwareX walked the IT team through the various options using Microsoft Secure Score and helped develop a plan to improve their security posture.

A blue rectangular box containing a quote in white, italicized text. The quote is preceded by a large white quotation mark icon.

Great learning curve for our own IT team through the SoftwareX knowledge share approach.

The Outcome

The agency's Microsoft cloud environment is much now much more secure.

They have been able to up skill their in house team whilst maintaining the relationship with SoftwareX to provide third line support if necessary.

As well as the security and compliance benefits the agency also have the marketing advantage of having a higher Microsoft Secure Score than their peers.
